1. Claims 1-36 are pending.

***Response to Arguments***

2. Applicant's arguments with respect to claims 1-36 have been considered but are moot in view of the new ground(s) of rejection. Claims 1,6,8,27,29,33 have been amended.

Examiner reminds the applicant that the computer file was splitted into packets was well-known in the art and it was not patentability.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-36 are rejected under 35 U.S.C. 102(e) as being anticipated by Brendel [6,587,438 B1].

3. As per claim 1, Brendel discloses An apparatus for transmitting a file through a network, apparatus comprising:

a file-splitting processor for splitting a file (web page) into a plurality of message segments and assigning one of a plurality of final destination addresses to each segment and the plurality of final destination addresses being assigned to a receiving

host; a message segment transmitter for transmitting the plurality of message segments to the receiving host using the plurality of final destination addresses [Brendel, a web page generating multiple packets with different network paths, col 17 lines 10-45; multiple packets with the same final destination IP address, col 10 lines 57-64].

4. Claims 6,8,27,29 and 33 contain the similar limitations set forth in claim 1.

Therefore, claims 6,7 are rejected for the same rationale set forth in claim 1.

5. Claims 2-5,7,8-26,28,30-32,34-36 contain the inherent features of the limitations set forth in claims 1, 6,8,27,29 and 33 respectively. Therefore, claims 2-5,7,8-26,28,30-32,34-36 are rejected for the same rationale set forth in claims 1, 6,8,27,29 and 33.
